

SECURE CHARGE CONNECTOR WITH PADLOCK (INCLUDED)

A padlock with three keys is included with some ClipperCreek charging stations (when connector style permits lock hole). This rust-proof, solid brass padlock is to secure a vehicle's charge from being accidentally interrupted from other users or just curious observers interested in how it works.

Figure 1. Locking the SAE-J1772™ Connector with padlock included.

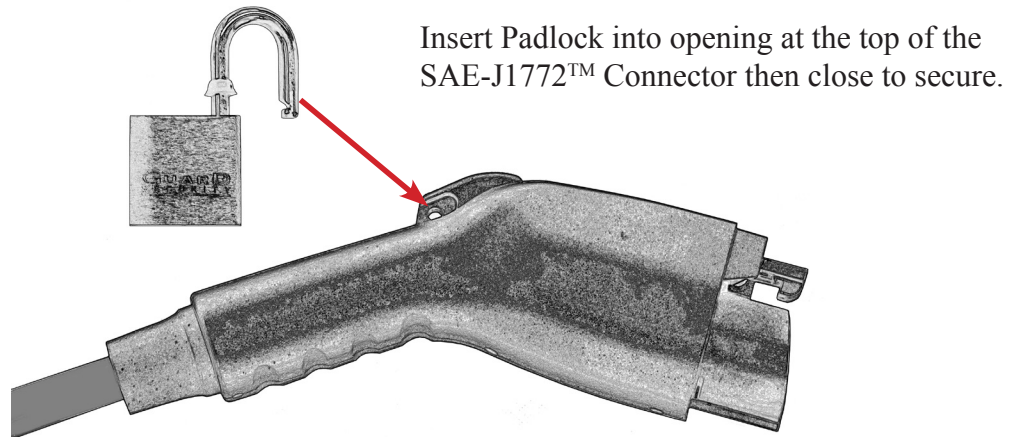

Figure 2. Charge Connector is now secured with Padlock and cannot be removed from vehicle without key.

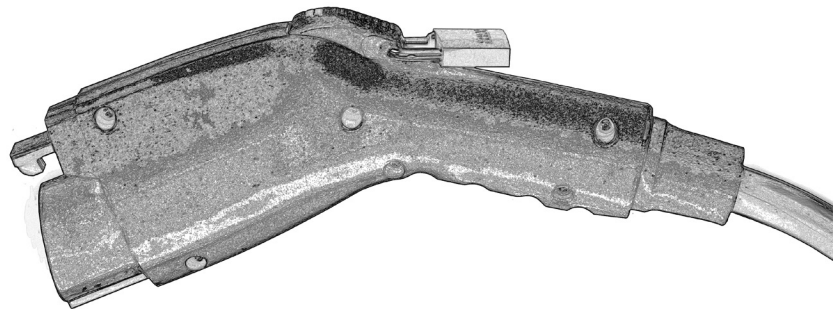

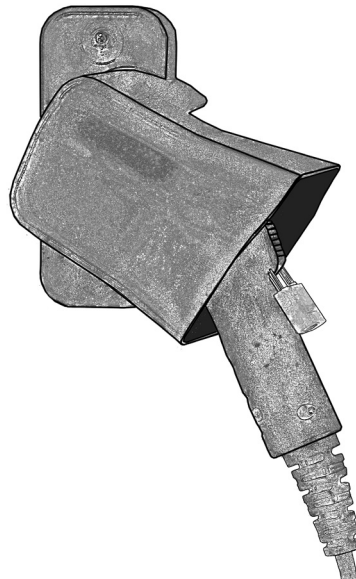

Figure 3. Padlock used in combination with connector holster after charging.

NOTE: This padlock can also be used in combination with our connector holster (also included) as a low cost access control solution. Refer to **Figure 3**.
