

Wall-Mount Connector Holster Installation

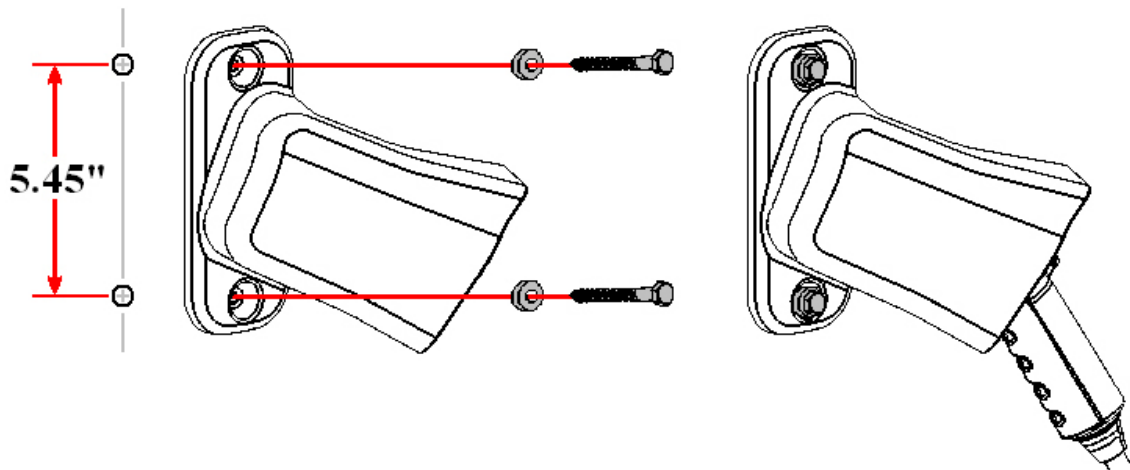

For use with AmazingE™

Mounting the Connector Holster

The Wall-Mount Connector Holster (sold separately) provides a convenient protective housing for the AmazingE™ connector head when it is not in use.

- The Holster should be placed so that users have easy and safe access to the connector.
- For indoor installation, mount the Holster between 18 and 48 inches above ground or grade.
- For outdoor installation, mount the Holster between 24 and 48 inches above the ground or grade.
- The Holster has two vertically aligned mounting holes spaced 5.45" apart, one each on the enclosure top and bottom.
- The vertical alignment of the AmazingE™ and Holster mounting holes allows for the convenient mounting of both components onto the same post or wall structure. For example, the holster may be mounted directly above the AmazingE™.
- Place the Holster such that both mounting holes can take advantage of solid structural framing inside of the wall or a strong wall surface.
- A set of exterior wall screws and stainless steel washers are included for the purpose of mounting the Holster to a wooden surface.
- For mounting to a solid surface such as concrete, brick or stone, alternate hardware may need to be procured. Examples of solid-wall mounting hardware include multi-sets, wedge anchors and sleeve anchors. Use the type of mounting hardware most appropriate for the supporting structure.
